What to Expect from ProCern

Cybersecurity Maturity Model Certification

The Cybersecurity Maturity Model Certification (CMMC) is evolving to meet the growing challenges of securing the Defense industrial base (DIB) and safeguarding controlled unclassified information (CUI). The updated standards will be mandatory for companies engaging with the DOD starting in 2025, begin your CMMC compliance process now to set your organization apart in this competitive market environment.

Leverage the expertise of ProCern Technology Solutions to navigate the transition and meet the requirement for DoD contracts. Our team is fully versed in the latest updates to CMMC 2.0, and we can help you assess what changes are necessary for your business to achieve the required level of CMMC certification. With our background in handling complex regulatory frameworks, our certified CMMC professionals have the knowledge and experience to support your team through every stage of the compliance process.

We offer comprehensive services, including initial scoping and data flow mapping, gap assessment, remediation of identified gaps, and audit support. Our team can also help you implement strategies to streamline compliance processes, reduce operational costs, and strengthen your cybersecurity posture, minimizing disruption to your business operations.

With our expertise in risk management and compliance, as well as our experience supporting companies in highly regulated industries, ProCern is your trusted partner for achieving and maintaining CMMC certification. We're here to help safeguard your organization's sensitive data while guiding you through the evolving landscape of cybersecurity requirements.

LEVELS OF CMMC CERTIFICATION

1

Required for organizations that work with Federal Contract Information. Based on 17 cybersecurity controls from FAR 52.204-21.

2

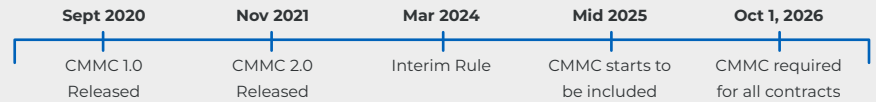

Required for organizations that work with Controlled Unclassified Information. Based on 110 cybersecurity controls from NIST SP 800-171.

3

Required for organizations that work with Controlled Unclassified Information and are subject to Advanced Persistent Threats. Based on 110 cybersecurity controls from NIST 800-171 plus 35 controls from NIST SP 800-172.
